

Trade RWAs and the tokens paired with them

One app on Robinhood Chain

ARBITRUM OPEN HOUSE SINGAPORE: ONLINE BUILDATHON

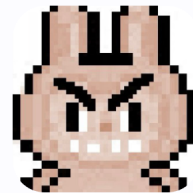

HODL.FAN @HODL_FAN

THE FOUNDER, AND THE PROBLEM

I'm a trader. So are the 50 people I asked.

Every one of us was hunting tokens paired with RWAs across Pons and Long, and checking by hand which RWA was behind each one. So I built one place to find them, check them, and trade them alongside the RWAs.

Founder [@hawabuilds](#)

Maths graduate. Six years full-time trader. Built the app end to end.

THE PRODUCT

Find it, check it, trade it

- 1 • Find.** Every RWA-paired token from Pons and Long in one live feed, plus the RWAs themselves.
- 2 • Check.** The verified RWA behind each token, a live chart and the news moving it.
- 3 • Trade.** Quick buy in one click, onchain through Uniswap, and follow other traders live.

TRACTION

In beta since 6 September, public this week

23
Wallets connected

61
Trades on-chain, each paying our fee

37.9k
Tokens listed, plus 195 RWAs

Wallets by week, not counting our own · trades from HodlRouter and Universal Router fee events on Robinhood Chain · no paid ads

BUSINESS MODEL

0.5% on every trade

A flat fee on every buy and sell, of RWAs and RWA-paired tokens, routed onchain through Uniswap on Robinhood Chain.

No token. We're not launching one. Revenue comes from trading volume, not a coin.

More trades, more revenue: our focus is volume

THE OPPORTUNITY

No one owns RWA trading on Robinhood Chain yet

General trading apps list every coin on the chain, so RWA-paired tokens get buried.

HODL does only RWAs and the tokens paired with them, with the RWA behind every token verified.

Nearly half of all RWA trades on Robinhood Chain are against tokens paired with them: \$709M of the \$2.21B traded since launch.

\$8.49M

traded in 24 hours, in tokens paired with one RWA: NVDA

At our 0.5% fee, that one RWA's daily volume is about \$42k in fees

How we get traders, and where we go next
